

FORTIS

STRENGTH FROM WITHIN

Advanced Multi-Component Flow Agent for Animal Performance

THE CHALLENGE

Mycotoxins are a constant and unpredictable threat on all farms.

Multiple toxins often present simultaneously

Reduced intake, poor feed efficiency, and immune suppression

Reproductive and metabolic disruptions

Even “clean” feed can carry subclinical risk

Single-mode adsorbents are no longer enough.

THE FORTIS SOLUTION

Fortis™ delivers multi-layer protection with a synergistic approach:

CLAY-BASED ADSORPTION

- High affinity for polar mycotoxins (e.g., aflatoxins)
- Rapid action in the digestive tract

ENZYMATIC DETOXIFICATION

- Targets non-polar & complex toxins (DON, fumonisins, T-2)
- Biotransformation reduces toxicity

YEAST CELL WALL SUPPORT

- Adsorbs select toxins and pathogens while supporting gut integrity
- Reinforces immune response under toxin stress

THREE SHIELDS OF PROTECTION

Bind. Transform. Support. Fortis works across multiple pathways to deliver broader protection than traditional binders.

PERFORMANCE BENEFITS

- ✓ Supports feed intake and nutrient utilization
- ✓ Improves feed efficiency and production performance
- ✓ Helps maintain gut health and integrity
- ✓ Reduces impact of multi-contaminant challenges
- ✓ Enhances consistency in variable feed conditions

TECHNICAL HIGHLIGHTS

- ✓ Broad-spectrum adsorption capability
- ✓ Effective across multiple mycotoxin classes
- ✓ Stable under feed processing conditions
- ✓ Compatible with vitamins, minerals, and additives
- ✓ Low inclusion rate, high efficacy

WHY FORTIS?

Not just an adsorbent – a performance protection system.

Multi-mechanism approach vs. single-ingredient products

Designed for modern, high-performance operations

Protects both animal health and economic return
